

Nedbank sustainable development financial inclusion criteria

April 2025

NEDBANK

Overview

At 31 December 2024, Nedbank Group's purpose-led business was R183bn (R145bn at 31 December 2023) in sustainable-development finance (SDF) aligned with the United Nations Sustainable Development Goals (UN SDGs). This builds on the baseline of R108bn that Nedbank had in place in 2021. Our ambition is to increase SDF exposures to around 20% of the group's total gross loans and advances (GLAA) by the end of 2025 (currently at 19%) through support of more than R150bn in new SDF.

This Nedbank Sustainable Development Finance Inclusion Criteria (SDFIC) guideline, initially disclosed in 2022, provides guidance for the business and insight for stakeholders with regards to the categorisation of sustainable-development financing and investments, which create positive societal and environmental outcomes and support a just transition¹ and are therefore considered SDF.

The accurate categorisation and tracking as well as expansion of SDF-related financing and investments align with Nedbank Group's desire to be a purpose-led business. Our purpose is to use our financial expertise to do good for individuals, families, businesses, and society, and we use the SDGs and appropriate SDG targets to measure and track the delivery of good systemic outcomes and impacts through purpose-led financing.

This guideline allows for the following objectives to be met:

- Implementing a consistent approach to the categorisation of SDF by using a clear, transparent, and unambiguous guideline that is understood across all areas of the group.
- Tracking, analysing, and reporting on our SDF via appropriate and evolving data management processes and systems and meeting related ambitions.
- Disclosing our SDF activity to our stakeholders, including shareholders, regulators, rating agencies, employees, and clients.
- Providing a robust framework that we can position with our stakeholders and environmental, social and governance (ESG) lenders regarding the types of lending activities that we view as sustainable development finance.

The SDF themes, which are aligned with the SDGs, are presented here together with a description of the eligibility criteria for each theme. These were decided through research and consultations with industry specialists, including workshops with key internal stakeholders. Guidance was also obtained from the South African Green Taxonomy and the Financial Sector Code.

A transaction must qualify under one of these themes to be considered as SDF. We review this document annually in line with our other policies and update it as required to reflect changing science, implementation practicalities, and evolving best practice.

1The shift from an extractive economy to a regenerative economy. It presents many opportunities to achieve social objectives and has the potential to be a new and sustainable engine of growth in lower-, middle- and higher-income economies. It can be a net generator of decent green jobs that can contribute significantly to poverty eradication and social inclusion. There is also a significant risk that without a just transition, a low-carbon, environmentally sustainable economy, which is essential to the well-being of future generations, will not be achieved.

	8	Sustainable transportation	<ul style="list-style-type: none"> The manufacturing, retrofitting or purchasing of low-carbon transportation technology (eg electric, hybrid and hydrogen-fuelled transportation), including vehicles, buses, tractors, planes, trains and ships. The development, operation, and upgrade of low-carbon transportation infrastructure, including electric vehicle charging infrastructure. Rail transportation projects and infrastructure upgrades. Efficiencies in marine and aviation transportation. Mass transit infrastructure. 	9	9,11	<p>9.1: Develop quality, reliable, sustainable and resilient infrastructure, including regional and transborder infrastructure, to support economic development and human well-being, with a focus on affordable and equitable access for all.</p> <p>11.2: By 2030, provide access to safe, affordable, accessible and sustainable transport systems for all, notably improving road safety by expanding public transport, with special attention to the needs of those in vulnerable situations, women, children, persons with disabilities and older persons.</p>
	9	Water and wastewater management	<p>Activities that expand public access to safe and affordable drinking water and adequate sanitation facilities and improvements in water quality or water use efficiency, such as the following:</p> <ul style="list-style-type: none"> Construction, maintenance and equipment for water supply and/or treatment infrastructure (pipework). Water treatment facilities. Wastewater discharge infrastructure. Water-saving systems and technologies (smart meters). Desalination projects. Sustainable urban drainage systems. 	6	6	6.1: By 2030, achieve universal and equitable access to safe and affordable drinking water for all.
	10	Natural systems	<p>Activities that:</p> <ul style="list-style-type: none"> protect our natural systems (conservation); restore or prevent the degradation of biodiversity (invasive-alien-plant removal and wetland rejuvenation); restore land and soil health or prevent degradation (erosion management and remediation); restore or improve the natural flow of water systems; and improve the water quality of water systems. 	15	14, 15	15.5: Take urgent and significant action to reduce the degradation of natural habitats, halt the loss of biodiversity and, by 2020, protect and prevent the extinction of threatened species.
Social	11	Access to energy	<ul style="list-style-type: none"> Microgrid technologies (solar for households). Connection of individuals or communities to electrical grids. Innovative and affordable renewable-energy solutions for remote communities and low-cost and cleaner alternatives to solid fuels such as coal and kerosene (e.g LNG and LPG). Shared infrastructure schemes. 	7	1, 7	7.1: By 2030, ensure universal access to affordable, reliable and modern energy services.

12	Access to finance	Development or facilitation of new financial products, credit-scoring methodologies, operating models and distribution channels (including mobile banking) to advance financial inclusion (township economies, small, medium and microenterprises and micro business).	8	1, 8, 10	8.10: Strengthen the capacity of domestic financial institutions to encourage and expand access to banking, insurance and financial services for all.
13	Education	<ul style="list-style-type: none"> Savings and loan products to help families plan for and finance education costs (early-childhood development; primary, secondary, and tertiary education; or other skills training). The construction, maintenance or renovation of any greenfield or existing education facilities, including student accommodation, that would enable the efficiency, quality, access and capacity of the facility. Health, life and livelihood insurance cover to reduce the risk of children's being absent from school. 	4	4, 9	4.4: By 2030, substantially increase the number of youth and adults who have relevant skills, including technical and vocational skills, for employment, decent jobs and entrepreneurship.
14	Access to land	Financial support for the transfer of land to the previously disadvantaged sector of the population for the purpose of agriculture and better livelihoods.	10	2, 10	10.2: By 2030, empower and promote the social, economic and political inclusion of all, irrespective of age, sex, disability, race, ethnicity, origin, religion or economic or other status.
15	Small-business development	Providing finance for technologies, products and investments that build the capacity of entrepreneurs and small and medium enterprises [for a definition go to National Small Enterprise Act: Schedule 1: Amendment (www.gov.za)] to stimulate the informal economy and increase local sourcing, job creation and incomes.	8	8	8.3: Promote development-oriented policies that support productive activities, decent job creation, entrepreneurship, creativity and innovation, and encourage the formalisation and growth of micro, small- and medium-sized enterprises, including through access to financial services.
16	Affordable housing	<ul style="list-style-type: none"> Financial services offerings and solutions (products) to facilitate home ownership targeted at those houses valued at R915 200 or below in 2023, or rental housing with monthly rentals of R8 320 or less. Investment in improving the quality of existing social and affordable housing facilities. 	11	9, 11	11.1: By 2030, ensure access for all to adequate, safe and affordable housing and basic services and upgrade slums.

17	Sustainable-finance activities, including the following: <ul style="list-style-type: none"> Green bonds Sustainability-linked bonds Green loans Sustainability-linked loans 	Sustainable instruments used to finance or refinance assets, initiatives and project financing or investments that contribute to achieving specific objectives aligned with Nedbank’s purpose and vision of using its financial expertise to do good for individuals, families, businesses and society, aligned with the UN SDGs. <p>Sustainable-finance credit facilities relate to our lending to clients that can take the form of sustainability-linked loans, green loans, and/or sustainability-linked bonds (sustainable finance asset portfolio).</p> <p>Sustainable funding raised relate to liabilities of ours that we have arranged or have been arranged for us (as borrower) and that can take the form of either sustainability-linked loans, green loans, sustainability-linked bonds and/or green bonds issuances. They are not included due to the risk of double counting.</p>	Dependent on the objective or focus of the specific instrument.		

Considerations

This guideline was shaped by the following:

- There are currently various ESG protocols and frameworks that are used to guide ESG reporting globally. However, this space is considered relatively immature and continually evolving. The organisations that develop these protocols and frameworks are collaborating to develop more aligned and universal disclosure guidance. In addition, limited ESG disclosure directives and regulations have only recently been passed, and apply to only a few countries. Over time ESG-related information will be guided by rules and controls similar to those of financial accounting practices. Systems and processes to identify and gather the relevant ESG data to an investor-grade level of detail are also still developing. There is also not yet a globally published or accepted set of definitions for sustainable finance or SDF. In light of this, Nedbank Group has developed its own definition of ‘sustainable-development finance’, which is finance that creates specific positive societal and environmental outcomes and supports a just transition in alignment with the SDGs.
- ‘Just transition’ is defined as the shift from an extractive economy to a regenerative economy. It presents many opportunities to achieve social objectives and has the potential to be a new and sustainable engine of growth in lower-, middle- and higher-income economies. It can be a net generator of decent jobs that can contribute significantly to poverty eradication, wealth creation and social inclusion. There is also a significant risk that without a just transition, a low-carbon, environmentally sustainable economy, which is essential to the well-being of future generations, will not be achieved.
- Agriculture: For sustainable-development reporting up to 2024, the entire agriculture book has been included in the SDF baseline. This was due to the bank not yet having the required level of data granularity within those investments to analyse the associated social and environmental impacts. This will be refined going forward as the data insights mature and the details of this inclusion criteria are applied.
- In addition to the positive impacts that SDF brings, the Nedbank Group considers the potential negative impacts that these investments and loans may trigger. In observing the principle of ‘do no significant harm’, we use our Social and Environmental Management System (SEMS).
- Nedbank Group has committed to Net Zero 2050 and has started to develop carbon pathways to inform the sector’s transitions from a financed emissions perspective.
- This SDFIC must provide a guide for the accurate categorisation of all Nedbank’s SDF. It should be noted that we also have a Nedbank Sustainable-finance Fundraising Framework (SFFF), which specifically outlines the criteria under which sustainable-finance liability instruments are issued. These offerings include ‘use of proceeds’ instruments and will also cover sustainability-linked fundraising instruments.
